

**Why
Choose**

VisionFM®

Microsoft®
SQL Server.

crystalreports.

AutoCAD®

Top Ten Reasons ...

1	Pricing	At \$22,500 (\$25,000 CND) for a site license of Professional Facilities Management Software, VisionFM is by far the best value for your money. And, a lower price means a much faster return on investment.
2	Licensing	Our competition will charge you for the server application, for each user license, for each module/user and for supporting utilities. This is not only complicated but in many cases it is impossible to determine how many people at your company may need access to facilities information. At Vision we only sell our software as a bundle. The server application, unlimited users and all the modules are included. VisionFM Enterprise includes everything you need in a CAFM system, for today and for tomorrow.
3	Flexible implementation	With a site license the system can grow at a pace that's comfortable to you. Start out tracking your space and employees then expand into asset management, work orders, project management, leasing and budget management. All without purchasing any additional software, it's all included.
4	Highly Customizable	VisionFM Enterprise includes the built in Forms Designer, Query Creator and Database Designer. Administrators can create new forms, customize existing ones, add processes and approval levels, create custom reports, queries and even set up each user's interface. Note: one copy of Crystal Reports (sold separately) is required to customize reports.
5	True Web Functionality	The VisionFM Web Server provides you with an instant facilities web site capable of running all the forms, reports, queries and the VisionFM Drawing Viewer through a browser. Best of all, the user setup and administration is done through forms in VisionFM, no knowledge of web sites or programming language is needed.
6	Easy to Use	VisionFM's tab bar is so well organized that you are never more than two mouse clicks away from any feature of VisionFM. You can be running a lease abstract report and within two mouse clicks see a list of outstanding work orders. VisionFM even includes a Cue Card system that walks new users through each of the modules.
7	Industry standard third party products	Using industry standard products makes it easier to locate skilled operators, training and support. That is why Vision chose AutoCAD as its drafting software and Crystal Reports for report creation, both leaders in their industry.
8	Data Sharing	Using VB Script and ODBC drivers VisionFM can transfer data to and from any ODBC compliant data source including Microsoft SQL, Oracle, Access and Excel. Importing and exporting can be a simple one-time process or set up with analysis tools to preview the data and make corrections to data on the fly.
9	Industry Experts	Vision's dealers are not just experts in CAFM software, they are experienced Facilities Managers who enhance the implementation of VisionFM with their real-world experience in project management, space planning, asset management, lease management and more. Visit our dealer web page to locate a dealer in your area or to locate one with a specific skill set.
10	A Proven Solution	Now in release 9, VisionFM is continuously being improved to meet the requirements of our user community. VisionFM boasts a 95% + retention rate, that means that since the first release of our software seven years ago, over 95% of the companies that started using VisionFM are still using it today. After the other nine reasons help you in selecting VisionFM, it's the fact that the software does what it says it will do, becoming a valuable tool for tracking your facilities, which will keep you using it.
